

## Paying Attention to Social Interactions

The **Social Competence & Treatment Lab (SCTL)** in the Dept. of Psychology at **Stony Brook University** is conducting a study to better understand how attending to social interactions may affect behavior.

We are looking for participants who are **at least 18 years old** and have a **smartphone**. Participation in this study is **voluntary** and **confidential**.

After a 15-minute screening survey, participation will involve:

- Pre-test visit for **1 hour 45 minutes**: Questionnaires, cognitive assessment, and computer activity in an EEG
- Using an app on your smartphone regularly for **1 week**
- Post-test visit for **1 hour and 20 minutes**: Questionnaires & computer activity in EEG

Potential benefits of participating include:

- Help us to learn more about the neurological processes associated with social cognition and perception, and how paying attention to social interactions may affect these processes and behavior.

As thanks for your time and effort:

- At the end of the post-test visit, your choice to receive **\$25 or 2.5 credits (Sona)**.

To find out if you are eligible, log onto the SBU Psychology Dept. Sona System and click Studies. Go to **Screening for Study: Paying Attention to Social Interactions**, carefully read consent, and complete the **15-minute online survey**, for which you will receive **.25 credits** on Sona.

In the survey, you will be asked for your email address for us to contact you. If you are eligible, the email you receive will include more info & Sona invitation code to sign-up for the full study.
